

CPOMS for International Schools

Empowering Schools to Uphold and Enhance their Safeguarding Initiatives.

What is it?

CPOMS Safeguarding software seamlessly supports your school's systems and processes dedicated to monitoring Child Protection, Safeguarding, pastoral, and welfare concerns for pupils.

The software is highly intuitive, empowering school staff to log incidents effortlessly—all within a simple, easy-to-use form. As information is entered, a student's chronology is automatically constructed, providing a clear and comprehensive picture with minimal effort. This cloud-based software ensures a secure, centralized method for storing and accessing sensitive data.

Why is it Important?

CPOMS software helps lessen the burden on staff to record and manage concerns, prepare reports and perform other administrative duties. Schools can quickly gain efficiencies whilst focusing on the wellbeing of pupils. When it comes to inspections, CPOMS software helps schools confidently demonstrate their Safeguarding systems and processes that work to protect pupils and that exercise urgency in referring to the appropriate agencies, whilst providing clear, effective and secure record-keeping.

Highlights

Flexible and Customisable

Ensure CPOMS is aligned to your international setting including categories that may be specific to the country or locale.

Easy on Staff

CPOMS requires little to no training, so regardless of how recently a staff member has joined the school, they can accurately log behaviours and concerns in the system.

Key Features

Aligned with Local and British Standards

Easily meet safeguarding compliance requirements with CPOMS Safeguarding auditing and reporting features.

International Settings

CPOMS is designed to be adaptable to your international setting, accommodating specific categories relevant to the country or locale.

Customisation

Tailor CPOMS software to meet your school's exact needs, including categories of concern, user roles and permissions, input forms and alerts. This helps ensure an effective, easy-to-use tool for staff, DSLs and Headteachers.

Role-based Access

The enterprise-level permissions system allows each school to uniquely control which members of staff can access each type of sensitive information.

MIS Integration

Integration with leading MIS systems prevents the need to enter data twice. CPOMS adds complementary value to existing MIS systems by delivering specialist functionality together with effective management information, trend analysis and useful statistics.

Audit Controls

All incidents, actions and key transactions performed in CPOMS are time, date and user-stamped. Consequently, an audit trail is maintained that accurately records all key activities undertaken using the system. Now you can track and analyse what has been done, by whom and when.

Reporting

Easily prepare summary reports for governance, inspections and statistical breakdowns highlighting student concerns or trends.

About Us

Used by more than 18,500 Establishments in 68 countries globally, CPOMS is the market-leading software for monitoring Safeguarding, wellbeing and all pastoral issues.

"We are picking up on low-level behavioural concerns, we can spot patterns and potential problems and we can intervene with targeted individuals, tutor groups and whole year cohorts alike. From helping us track the ups and downs of friendships and development in our infants and nursery classes to protecting our more vulnerable sixth formers, CPOMS is an invaluable tool."
